SUMMARY

Senior Software Engineer specializing in **scalable backend systems, distributed architectures, and cloud-native platforms**. Proven ownership of mission-critical services in high-scale environments, driving improvements in reliability, cost efficiency, and release confidence. Strong background in **microservices, system design, and AI/LLM-powered applications**, including real-time systems and **multi-agent pipelines**.

EXPERIENCE

- **Razorpay**
Senior Software Engineer Oct 2025 - Present
 - Designed and shipped the UPI Autopay v3 mandate registration fee calculator, enabling Razorpay to recover mandate fees from merchants previously absorbed as a loss — driving a **~Rs.50L increase in net revenue**.
 - Architected, built, and served as sole on-call owner for a new internal service that maps live production traffic to test coverage, surfacing 32 P0 services(out of 51) below 60% coverage and driving org-wide remediation.
 - Identified and resolved a long-running SQS misconfiguration that was silently costing **~\$900/month** in unnecessary AWS spend and polluting service logs with persistent errors.
 - Cut the ledger service's log volume **by 20%** by removing redundant log statements through a multi-agent pipeline analysis and optimizing payload sizes, reducing storage costs while preserving critical observability.
 - Diagnosed and corrected faulty Kubernetes base deployments in the stage environment, unblocking multiple dependent teams stalled by the broken environment.
 - Led a redesign of the **end-to-end testing framework** for a mission-critical ledger service while mentoring 2 junior engineers and 1 intern through onboarding and code reviews.
 - Tech Stack:** Golang, AWS, Postgres, MySQL, Redis, Kafka, Docker, Kubernetes, SQS, CI/CD.
- **Unacademy**
Senior Software Engineer Apr 2024 - Sep 2025
 - Led the development of a zero-to-one content consumption application in Golang, introducing gamified features (leagues, XP logic, streaks, badges, achievements, homepage revamp) that boosted user engagement and **retention by 12%**.
 - Built and deployed **AI-powered solutions** — LLM-based content generation, multi-agent automation pipeline, and personalized vocabulary practice tool — that streamlined content creation and improved learning outcomes.
 - Developed a **real-time voice assistant** using LiveKit WebRTC, enabling interactive, low-latency user experiences.
 - Optimized 10+ backend APIs, cutting **latency by 35%** and **server load by 20%**, improving scalability and cost efficiency.
 - Designed a media compression pipeline that shrank asset size **by 87%**, cutting CDN costs and improving page speed.
 - Mentored 2 junior engineers, guiding their technical growth through code reviews and hands-on feedback.
 - Tech Stack:** Golang, AWS, Postgres, MySQL, Redis, OpenAI, Claude, LiveKit, Agenta, ElevenLabs, Docker, CI/CD.
- **Paytm**
Software Engineer Jan 2022 - Feb 2024
 - Onboarded 3 clients and integrated 11 plans with full API support, accounting for **10% of the total platform plans**.
 - Improved onboarding funnel systems, reducing drop-offs by **17%** through backend-driven flow optimization.
 - Eliminated 5XX downstream errors in a **microservices architecture** by implementing interceptor-based error handling and payload validation.
 - Re-architected the deployment pipeline, achieving a **30%** improvement in response time and enhancing system reliability.
 - Tech Stack:** Node.js, Typescript, ReactJS, Express.js, Python, Django, NestJS, AWS, MongoDB, MySQL, Jest.

SKILLS

- **Languages:** Golang, Python, TypeScript, JavaScript, C++
- **Backend & Infrastructure:** Microservices, Distributed Systems, System Design, Docker, Kubernetes, AWS, CI/CD, REST APIs, gRPC
- **DevOps & Observability:** Jenkins, GitHub Actions, ArgoCD, Spinnaker, Grafana, Prometheus, New Relic
- **Messaging, Data & Storage:** Kafka, SQS, PostgreSQL, MySQL, DynamoDB, MongoDB, Redis
- **AI / LLM Systems:** OpenAI, Claude, LLM pipelines, Multi-Agent systems, Real-Time AI Applications

EDUCATION

B.Tech in Computer Science and Engineering

Harcourt Butler Technical University, Kanpur
